Profile Summery

React Native developer with experience building cross-platform mobile applications. Skilled in Flutter and MERN stack, with strong knowledge of APIs and modern UI development. Focused on creating efficient and scalable solutions

Experience

Playspots 2021 – 2023

React Native Developer

Kozhikode, Kerala

- Developed and maintained cross-platform mobile applications using React Native, focusing on performance and smooth user experience.
- Implemented state management using Redux, Context API, and other modern approaches to ensure efficient data handling and smooth application performance.
- Integrated REST APIs and handled real-time data, while actively debugging issues and optimizing application performance across different devices.

Zypheron Solutions

2023 – Present

Co-Founder & Full Stack Developer

Kottakkal, Kerala, India

- Co-founded a software development company delivering mobile and web applications for diverse clients.
- Led end-to-end development including requirement analysis, architecture design, development, testing, and deployment.
- Built scalable applications using React Native, Node.js, Express, and MongoDB with focus on performance and reliability.
- Developed and integrated RESTful APIs and optimized database structures for efficient data management.
- Collaborated closely with clients to deliver customized, user-friendly, and business-oriented solutions.

Education

APJ Abdul Kalam Technological University

2022 – 2025

Bachelor in Computer Engineering

Kuttippuram, Kerala

State Board of Technical Education, Kerala

2018 – 2021

Diploma in Computer Engineering

Valanchery, Kerala

Technical Skills

Languages: JavaScript, Python, Java

Mobile: React Native, Flutter

Frontend: React.js, HTML, CSS, React Hooks (useState, useEffect, useContext)

Backend: Node.js, Express.js, Flask, Spring Boot

Databases: MongoDB, MySQL, PostgreSQL, Firebase, Supabase

State Management: Redux, Redux Toolkit, Context API

React Native: useEffect, useFocusEffect, Event Listeners

Cloud & Services: AWS

Tools: Git, GitHub, Postman, VS Code

Projects

Playspots (User, Manager & Admin Apps) | *React Native, Redux, REST API, AsyncStorage*

- Developed a turf booking ecosystem with three applications: User App, Manager App, and Admin App.
- Enabled users to discover venues, check availability, and reserve slots in real-time.
- Built manager features for handling bookings, schedules, and turf availability.
- Designed admin controls for managing users, vendors, and overall platform operations.
- Implemented authentication and persistent sessions using Redux and AsyncStorage.
- Integrated REST APIs for managing turf listings, bookings, and user data.
- Designed responsive UI components and optimized app performance for smooth user experience.

Voter Marking System | *React Native, Backend API*

- Built a mobile-based voter tracking system to mark and manage voter participation during elections.
- Enabled real-time status updates and data synchronization with backend services.
- Designed simple and efficient UI for quick access and usability in field conditions.

Charity Management App | *React Native, Firebase / REST API*

- Developed an application to manage charity activities, donations, and beneficiary records.
- Implemented data storage and retrieval for tracking donations and user contributions.
- Created user-friendly dashboards for monitoring activities and reports.

Al-Kahbi (supermarket Management, POS) | *React Native, Billing Logic, REST API*

- Designed a retail management system to handle billing, product tracking, and discounts.
- Implemented features for invoice generation, price calculation, and stock management.
- Focused on simplifying manual processes into a digital workflow for small businesses.

VanSale App | *React Native, Offline Storage, API Integration*

- Developed a van sales application for field sales operations including order management and billing.
- Implemented offline data handling to support usage in low-network areas.
- Integrated backend APIs for syncing sales and inventory data.

SIFO (Saudi Indian Football Forum) | *HTML, CSS, JavaScript*

- Developed a web platform for football enthusiasts to share updates, discussions, and community content.
- Designed responsive layouts and interactive UI components for better engagement.

MES UAE Alumni App | *React Native, API Integration*

- Developed an alumni networking platform to connect members, share updates, and manage events.
- Implemented user profiles and communication features to improve engagement.

TasmAI (Teacher & Student Management App) | *React Native, REST API, Real-time Chat*

- Developed an education management system for handling assignments, notes, and academic activities.
- Integrated real-time chat functionality for communication between teachers and students.
- Enabled structured sharing of study materials, tasks, and updates.

Smart Energy E-commerce Web App | *HTML, CSS, JavaScript, Backend API*

- Developed a web-based e-commerce platform with product listing, cart, and checkout features.
- Integrated backend APIs for dynamic data handling and responsive user experience.

Smart Energy E-Commerce Mobile App | *React Native, TypeScript, Redux, REST APIs, Node.js, Async Storage, push notification*

- Engineered a cross-platform mobile application for Android and iOS featuring categorized product listings, persistent cart management, and seamless multi-step checkout.
- Implemented global state synchronization using Redux Toolkit and integrated secure RESTful endpoints for real-time inventory tracking, user authentication, and payment gateway processing.
- Optimized list rendering with `FlashList` and leveraged cached remote imagery to achieve 60 FPS scrolling performance across low-end mobile devices.

GNet Food Delivery App | *React Native, TypeScript, Redux Toolkit, Node.js, Google Maps API*

- Engineered a cross-platform food ordering and digital pickup platform with real-time restaurant catalog discovery, dynamic cart management, and multi-mode fulfillment (delivery & takeaway).
- Built an automated token-based order dispatch system utilizing WebSockets to assign unique dynamic order tokens, broadcast live queue status (Queued, Preparing, Ready), and prevent kitchen bottlenecks.
- Integrated Google Maps SDK for real-time driver tracking alongside local push notifications for token-ready alerts, maintaining responsive UI updates under active data streams.
