Profile Summary

Full-Stack Developer with 6 years of professional experience building cross-platform mobile applications, responsive web applications, and backend services. Proficient in React Native, React.js, Node.js, Python FastAPI, Java Spring Boot, REST APIs, and database management. Experienced in developing scalable, user-focused solutions from development through deployment.

Experience

Ciferz 2020 – 2021

Software Developer Intern (Hybrid) *Manjeri, Kerala, India*

- Started my software development career while pursuing a Diploma in Computer Engineering, gaining practical industry experience.
- Developed frontend components and backend modules using React, Java, and Spring Boot.
- Built web application features and implemented business logic to support application functionality.
- Applied REST API integration and application architecture principles to strengthen full-stack development skills.

Playspots 2021 – 2023

React Native Developer *Kozhikode, Kerala*

- Developed and maintained cross-platform mobile applications using React Native for Android and iOS.
- Implemented Redux and Context API to improve state management and maintain consistent application data.
- Integrated REST APIs, resolved application bugs, and optimized performance across mobile devices.

Zypheron Solutions 2023 – Present

Co-Founder & Full-Stack Developer *Kottakkal, Kerala, India*

- Co-founded a software development company delivering customized mobile and web applications for clients.
- Managed end-to-end development, from requirements analysis and architecture design to testing and deployment.
- Built web and mobile applications using React Native, Node.js, Express, and MongoDB to meet business needs.
- Developed RESTful APIs and optimized database structures to improve data retrieval and application efficiency.
- Collaborated with clients to deliver user-friendly solutions aligned with project requirements and business goals.

Education

APJ Abdul Kalam Technological University 2022 – 2025

Bachelor in Computer Engineering *Kuttippuram, Kerala*

State Board of Technical Education, Kerala 2018 – 2021

Diploma in Computer Engineering *Valanchery, Kerala*

Technical Skills

Languages: JavaScript, Python, Java
Mobile: React Native, Flutter
Frontend: React.js, HTML, CSS, React Hooks (useState, useEffect, useContext)
Backend: Node.js, Express.js, FastAPI, Flask, Spring Boot
Databases: MongoDB, MySQL, PostgreSQL, Firebase, Supabase
State Management: Redux, Redux Toolkit, Context API
React Native: useEffect, useFocusEffect, Event Listeners
Cloud & Services: AWS, REST APIs
Tools: Git, GitHub, Postman, VS Code

Projects

Playspots (User, Manager & Admin Apps) | *React Native, Redux, REST APIs, AsyncStorage*

- Developed a turf booking ecosystem consisting of User, Manager, and Admin applications.
- Enabled users to discover venues, check availability, and book slots in real time.
- Built manager features to manage bookings, schedules, and turf availability.
- Implemented admin controls for managing users, vendors, and platform operations.
- Implemented authentication and session persistence using Redux and AsyncStorage.
- Integrated REST APIs to manage turf listings, bookings, and user data.
- Developed responsive UI components and optimized application performance.

Voter Marking System | *React Native, Backend APIs*

- Developed a mobile application to track and manage voter participation during elections.
- Implemented status updates and data synchronization with backend services.
- Designed an intuitive interface for efficient use in field conditions.

Charity Management App | *React Native, Firebase, REST APIs*

- Developed an application to manage charity activities, donations, and beneficiary records.
- Implemented data storage and retrieval to track donations and contributions.
- Created dashboards to monitor charity activities and generate reports.

Zyqiq POS (Supermarket Management System) | *React Native, Billing Logic, REST APIs*

- Developed a retail management system for billing, product tracking, and discount management.
- Implemented invoice generation, price calculations, and stock management.
- Digitized manual retail processes to improve operational efficiency for small businesses.

VanSale App | *React Native, Offline Storage, API Integration*

- Developed a van sales application for field operations, order management, and billing.
- Implemented offline data handling to support operations in low-connectivity areas.
- Integrated backend APIs to synchronize sales and inventory data.

SIFO (Saudi Indian Football Forum) | *HTML, CSS, JavaScript*

- Developed a web platform for football enthusiasts to share updates, discussions, and community content.
- Created responsive layouts and interactive components to improve user engagement.

MES UAE Alumni App | *React Native, REST APIs*

- Developed an alumni networking platform to connect members, share updates, and manage events.
- Implemented user profiles and communication features to improve engagement.

TasmAI (Teacher & Student Management App) | *React Native, REST APIs, Real-Time Chat*

- Developed an education management system for assignments, notes, and academic activities.
- Integrated real-time chat for communication between teachers and students.
- Enabled structured sharing of study materials, tasks, and academic updates.

Smart Energy E-Commerce Web App | *React, HTML, CSS, JavaScript, Backend APIs*

- Developed an e-commerce platform featuring product listings, shopping cart, and checkout functionality.
- Integrated backend APIs for dynamic data management and responsive user interactions.

Smart Energy E-Commerce Mobile App | *React Native, TypeScript, Redux Toolkit, Node.js, REST APIs*

- Developed a cross-platform application for Android and iOS with product listings, persistent cart management and multi-step checkout.
- Integrated REST APIs for authentication, inventory management, and checkout workflows, with centralized state management using Redux Toolkit.
- Optimized list rendering using FlashList and implemented image caching for improved mobile performance.

GNet Food Delivery App | *React Native, TypeScript, Redux Toolkit, Node.js, Google Maps API*

- Developed a cross-platform food ordering application supporting delivery, takeaway, restaurant discovery, and cart management.
- Implemented token-based order tracking and WebSocket updates for Queued, Preparing, and Ready statuses.
- Integrated Google Maps for driver tracking and push notifications for order-ready alerts.
